Configure VSCode to use local ollama coder

GitHub co-pilot is not needed. Use '*Continue*' extension, instead

Introduction 21

'*Continue*' brings a chat-box and uses ollama. The extension is easy to install and configure. Install extensions in this order:

a. First python and Jupyter notebook extensions. (Python icon appears on the left panel)
b. Then, Ollama related extensions
c. Finally, *Continue* extension. (*Continue* icon appears on the left panel.)

Any code developed by *Continue* chat box can be Inserted in the current cell of the Jupyter Notebook by clicking Insert icon on the chat box (the first icon).

Follow screen shots:

First Screen shots when VSCode is started:

Figure 1: Nothing to do. Click Next Section

Figure 2: Just close the Walkthrough tab at the top.

Figure 3: No tab open.

Install Extensions

Figure 4: Click Extensions and install the first four python related extensions, including 'Jupyter' extension

Figure 5: Search for ollama. Install Ollama Autocoder, VSCode Ollama, Ollama connection, Ollama commit, Easy-Ollama, Ollama Local Chat

Figure 6: Close Extension and click File icon on the left panel

Figure 7: Select ***Documents/defenceEstates*** *folder*

Figure 8: Click File-->Open File-->Select Jupyter notebook

Figure 9: At top-right click ***Select Kernel****. Select* ***base*** *Conda environment*

*Figure 10: Install **Continue** as mentioned*

Configuring Continue first time

*Figure 11: Open **Continue** configuration through the last icon on the left panel*

Figure 12: Click on Local and configure

Clearing chat:

Figure 13: Click here (on redo icon)

Figure 14: Existing chat messages appear. Delete them

Figure 15: Everything is clean

Reconfiguring Model in Continue

Figure 16: Click on gear icon on the right of chat box

Figure 17: Left panel to change Continue Settings. Click on the fourth icon from the top

Figure 18: Click on the gear icon to look at the configuration file

Figure 19: Click on the gear icon to open the configuration file.

Figure 20: Change model names. deepcoder:latest changed to deepcoder:1.5b

Figure 21: Click here (box) to see the models

Close VSCode and then restart for changed settings to take effect.
